

HAPSARI LAKSMI WIJAYANTI

hapsari.laksmiw@gmail.com ♦ www.linkedin.com/in/hapsarilw ♦ <https://github.com/hapsarilw>

Front End Developer with 4+ years building production web applications for enterprise logistics. Lead frontend engineer on a crew communication portal, authoring the majority of the codebase and specializing in reusable component systems, real-time features, and TypeScript-first architecture.

EXPERIENCE

OneByOne Logistical

Front End Developer

May 2022 - Present

Crew Communication Portal — Lead Frontend Developer

- Lead frontend developer on the vessel crew portal, authoring **391 of 576 commits (~68%)** across a React 19 + TypeScript + Vite codebase of 350+ modules and 15 feature areas.
- Built **a real-time group chat module on SignalR** with optimistic message rendering and live typing, edit, delete, and unread-count sync, sub-second updates with no polling.
- Designed a reusable 48-component UI system with 40 Storybook stories, standardizing forms, tables, date/time pickers, and modals across the product.
- Set up **multi-environment CI/CD** (dev / production) with scripted Vite builds, Azure pipeline image builds, and Vercel deploys.
- Implemented internationalization (i18next), type-safe forms (React Hook Form + Zod), and Redux Toolkit state management.

Warehouse Management System Portal — Frontend Web Developer

- Developed **50+ warehouse operations screens** (putaway, receiving, storage & pallet management, stock-on-hand, QC status) on a React + Redux Toolkit codebase.
- Built **QR / barcode scanning workflows** (camera and hardware scanner) for pallet and storage-unit tracking on the warehouse floor.
- Delivered data-heavy tooling with TanStack Table, XLSX / PDF export, and Formik + Yup validation, extending the shared component library.

PROJECT

OptiRoute — Enterprise Logistics Platform : [Preview](#) [GitHub](#)

- Solo-built a dispatcher control dashboard on **Next.js 16 + TypeScript**, modeling a four-stage pipeline: data ingestion, AI route optimization, fleet dispatch, and live telemetry.
- Built a **virtualized 10,000-row manifest grid** (TanStack Table + Virtual) that keeps only ~20–30 rows in the DOM, holding interaction latency under 200 ms during filter and sort.
- Implemented **AI route optimization** with Zod-validated structured output, nearest-driver assignment by Haversine distance, live Mapbox GL / WebGL telemetry with off-route alerts, and role-based access control. Tested with Vitest + React Testing Library.

SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frameworks: React 19, Next.js 16, React Native

State & Data: Redux Toolkit, Zustand, TanStack Query, TanStack Table & Virtual

Forms & Validation: React Hook Form, Zod, Formik, Yup

UI & Design Systems: Tailwind CSS, Radix UI, Storybook, component library architecture

Real-time & Integrations: SignalR, Google Maps, MapBox GL, i18next

Tooling & Testing: Vite, Git & GitHub, Claude Code, Azure Pipelines, Vercel, Vitest, MSW, SonarQube

EDUCATION

Parahyangan Catholic University — Bandung, Jawa Barat

Bachelor of Computer Science
